

Deviations from '*Simula Standard*'

The current version of this SIMULA system differs from the *Simula Standard* in some areas. Following the chapters of *Simula Standard*, this is a complete list:

- 3 The implementation of '**' deviates from the given definition.
 It is always evaluated in long real and the result is converted
 to the appropriate type.
- 4 Virtual labels are not fully implemented. In certain cases goto such labels
 may result in Runtime errors.

 Switches and labels "seen" through inspection are illegal (and not
 invisible as the Standard demands). (SJEKK DETTE)
- 6 External non-SIMULA procedures are NOT IMPLEMENTED.
- 9 The **name** specified parameter to the random drawing procedures is not used.
 Instead, the default seed in the Java Library is used.

Remaining Work

Fullfør File-procedure: setaccess. Ihvertfall CREATE og PURGE
